# TERRAZZO

AVAILABLE IN 3 TERRAZZO METHOD OPTIONS :

## TERRAZZO SLAB

Cut with a precision cutting machine, so your joint grout (nat) could be as small as 0.2mm (hairline). Stones are evenly distributed between slabs. Therefore, with even distribution and precision cutting, nakedstone's terrazzo will look like a seamless floor.

- The flattest rock (smooth surface)
- Say NO to cracks & stains
- High scratch resistance (all slabs are pressed with 600 tons of weight - non porous and non permeable)
- More variety of rocks

## TERRAZZO INSITU RESIN

### ADVANTAGES :

- Application on site without limitation of area.
- Color is to be brighter than cement base.
- No cracks guaranteed.
- Compressive strength more than k500
- Hardness more than 7 MOHS
- Scratch resistance
- Seamless application

### LIMITATIONS :

- Limited pattern stone size (No large stone)
- Stone pattern distribution is not as evenly as **TERRAZZO SixHT SLAB**

## TERRAZZO INSITU SEMEN

### ADVANTAGES :

- Most economical option for terrazzo flooring
- High crack resistance
- Scratch resistance
- Seamless up to 4 x 4 m. If it is more than 4 m x 4 m, metal strip or shadow grout will be used (shadow grout are very subtle and barely noticeable).

### LIMITATIONS :

- Limited pattern stone size (No large stone)
- Build with **CRS (Crack Reduction System)**, but there is still the possibility of cracking
- Stone pattern distribution is not as evenly as **TERRAZZO SLAB SixHT**
